Configurations can encompass from 1 to 7 actuators in order to replicate the expected degrees of freedom (DOF). Vertically installed Gen II Actuators deliver three axes of movement (roll, pitch and heave). Horizontally installed Gen II Actuators deliver three axes of movement (sway, surge and yaw). Our basic “i” model can support most configurations. The HD model is intended for more robust and intensive usage. Users can choose between Captive and Non-Captive extremities as well as attachment brackets with L and U options.

Max. lifting capacity / Actuator*

250 lb / 114 kg
400 lb / 182 kg
250 lb / 114 kg
400 lb / 182 kg

Max. horizontal capacity / Actuator

In case of a horizontal installation of actuators, it is considered as average result that translation on limited friction surfaces can be done on weights up to 3 times nominal lifting capacity of Gen II Actuators.

**POWER REQUIREMENT (120V KIT)**

- 2 Actuator Kit
  - 120 VAC, 60 Hz, 2.5 A
  - 120 VAC, 60 Hz, 3.5 A

Electric consumption***

2 actuators setup 17$ / year; 4 actuators setup 32$ / year.

* Weight distribution must be evenly spread on the actuated motion platform to ensure Actuator maximum payload. Inquire for more information.

*** Based on a scenario of 250 lb, 8 hours per day at a cost of 0.08 $ kW/h.
Actuator extremities can be captive or non captive.

1. Allows the actuator to be attached to a sub-platform or on solid ground
2. For free flowing push against the floor with provided cupholder
3. To attach the actuators beneath the platform
4. To attach the actuators to the side of the platform
